Use RDGW	Check it for connecting to PAM Gateway with Remote Desktop C
RDGW address	Remote Desktop Gateway address for PAM Gateway
SSH Proxy settings	
SSH Proxy address	IP address or DNS name and port (optional).

User connection

The section contains data about user connections. User **RDP** and **SSH** connections are built-in and cannot be changed or deleted.

Adding new connection types

To add a new connection type, you need to research the client application and develop a template for Indeed Identity ESSO Agent. The new connection type is unique for each application, for development you need to **contact Indeed technical support**.

Service connection

The section contains data on service connections. All the service connections except SSH is built-in and cannot be changed or deleted.

Adding a Service Connection with SSH Type

The service operations template is unique for each *nix distribution. The distribution includes templates for SUSE Linux Enterprise Server, FreeBSD, CentOS, and Ubuntu in the **\MISC\SshTemplates** folder.

For the development of the new template you need to **contact Indeed technical support**.
